The Journal of Data Science, Statistics, and Visualisation (JDSSV) is a recent scientific open access and online journal established by the International Association for Statistical Computing. Its first publications appeared at the end of 2021. The journal welcomes contributions to practical aspects of data science, statistics, and visualisation, and in particular those which are linking and integrating these subject areas. This presentation is a call to assist with a new, exciting development of the journal to make it more attractive: each submission has a guaranteed editor decision within one month and, if accepted, a publication within three months after submission. We will explain how we want to organise it without sacrificing scientific quality. An important task will be done by a new officer, the Review Editor, who will have a limited but important task. This talk is explicitly aimed at those who would be interested in such a role and are enthusiastic to make the journal and its mission a success.
